

Microsoft Exchange - A Better Way

Microsoft Exchange is the de facto standard for business email. The old way to employ Exchange was to build and maintain your own server. For businesses, this meant

- Significant capital expenditure
- Long-term maintenance cost
- Assumed risk for downtime
- On-premise expertise to maintain
- Unpredictable reliability
- Costly failover solutions

Fortunately, there is a better way - Exchange hosted off-premise:

- Higher reliability through hosting on a more robust infrastructure
- Zero maintenance costs
- Risk is now on the host provider
- Minimal up-front expenditures
- Predictable monthly cost

Choose Your Provider Wisely

Not all hosted Exchange providers are created equal. Here are some key things to consider:

- What is the mailbox size limit? What's the cost for more space?
- What version of Exchange is being used?
- What kind of uptime is guaranteed?
- How secure & private is the infrastructure?
- How easy is it to manage?
- Where are their servers located?
- What kind of support do you get?

On-Premise Server
